SUNGLASS LENS OPTIONS 36-37

ACCESSORIES 38-39

If you understand the sweat and sacrifice of the best athletes on Earth, you understand that defiance is a part of their lifeblood. They refuse to obey limits, even the limits of possibility. Somewhere between obsession and rebellion, that same fire drives Oakley to create solutions for those who cannot compromise on performance, and nothing is closer to the soul of the company.

Authenticity is earned, and Oakley has spent more than three decades fusing innovation, performance and style to earn the respect of the greatest athletes on the planet. We do it by shattering the constraints of conventional ideas and redefining products by redefining what is physically possible. Oakley is known worldwide as an honest and honorable brand— an icon of performance and a global innovator that elevates physics to the level of art and sets the benchmark for others to follow.

Oakley has become one of the most sought-after brands on the planet, and world-class athletes will always inspire the company to seek out problems, create solutions and deliver the unexpected by erasing the line between form and function. We will challenge the limits of possibility for those who do the same in competition — those who aspire to greatness and those who have earned the right to be called the best on Earth.

EYEWEAR TECHNOLOGY

LENS TECHNOLOGY

HIGH DEFINITION OPTICS® (HDO®)

Proprietary geometries, high-performance materials and state-of-the-art design and production techniques allow Oakley to create eyewear that maintains optical correction for refractive power, optical clarity and prismatic power. These three classifications are measured by a global standard ANSI Z87.1 for optical performance ratings. Oakley is the gold standard and best-in-class, as evident in Private Pilot magazine's sunglass/optics test results comparing all eyewear manufacturers.

IMPACT PROTECTION

The lens materials and frame geometries of Oakley eyewear provide unsurpassed protection against high-velocity and high-mass impact. For high-velocity impact testing, a quarter-inch steel shot is blasted from a pneumatic cannon at 102 mph / 164 kmh. The high-mass impact test uses a metal spike (more than a pound of weight / half a kilo) dropped from over four feet. The unique combination of wrapped, raked-back lens geometries and durable Plutonite® lens material allows Oakley eyewear to exceed the standards of these impact tests, established by the American National Standards Institute.

UV PROTECTION

Oakley eyewear provides unbeatable protection against the damaging rays of ultraviolet radiation. Oakley's Plutonite® lens material inherently blocks 100% of all UVA, UVB, UVC and harmful blue light. The protection is formulated into the lens material, as opposed to a thin surface film that can become scratched, leaving dilated pupils exposed to ultraviolet leaks. Shielding has nothing to do with the darkness or color of the lens, so even clear Oakley lenses provide full protection. The wrapped, raked-back architecture of Oakley eyewear provides further protection by blocking UV from the periphery.

OAKLEY HDPOLARIZED

Oakley HDPolarized technology surpasses industry standards for clarity, performance and durability. Common techniques of incorporating polarization films into lenses by lamination (using adhesive to sandwich the film between lens layers) and drop forming (sandwiching then heating and pressing over contoured forms) can cause haziness and optical distortion. Instead, Oakley uses an injection-molding process to infuse the lens material around the filter. This liquid fusion creates bonding at the molecular level, allowing the filter to achieve the highest possible level of performance.

PHOTOCHROMIC

Oakley lenses are available with photochromic technology to darken and lighten automatically in response to changing light. They help you adapt to changing conditions while filtering out 100% of harmful UV. Plus, the added visual quality and comfort of having lenses that aren't too dark when the sun pulls a disappearing act, or too light when it knifes through the clouds.

PLUTONITE® LENS MATERIAL

Lightweight Plutonite® lens material offers superior comfort, clarity and protection against impact and ultraviolet radiation. Maintaining the proven safety characteristics of Oakley eyewear, the impact-resistant material blocks 100% of all UVA, UVB, UVC and harmful blue light. Plutonite® is the only lens material able to achieve the performance standards required by the digital design and production technologies utilized by Oakley.

IRIDIUM® LENS COATINGS

Oakley Iridium® lens coatings allow the wearer to tune transmission for any light condition. Superheated metallic oxides are fused to the lens at the molecular level, permanently bonding to create a uniform filtering layer that optimizes contrast and minimizes glare. Tuned to transmit from 9 to 92 percent of available light, the coatings are specifically formulated for optimal balance between reflection, transmission and absorption, depending on the targeted environment for usage.

AVAILABLE WITH OAKLEY AUTHENTIC PRESCRIPTION LENSES

Oakley can custom-build eyewear with prescription lenses exactly to the doctor's orders. Take advantage of the uncompromising quality and innovation of a specialty lab created for Oakley dealers. It's the only way to maintain the integrity and warranty of the Oakley sunglass frame. Numerous lens options are available, including our polarized and progressive lens technologies, and all lenses feature the unbeatable clarity of High Definition Optics® (HDO®).

FRAME TECHNOLOGY

FRAME COMPOSITION

Engineering breakthroughs in structural materials allow Oakley to produce lightweight, high-performance frames that maintain superior protection and comfort. The polymers in O Matter® frames are formulated for high durability, as well as controlled flexibility for improved safety during impact. To produce the ultra-strong, ultra-lightweight chassis of Oakley wire frames, five metallic compounds are fused into a single C-5™ alloy. Both frame materials maintain resistance to ultraviolet radiation, humidity, thermal shock and chemical exposure.

THREE-POINT FIT

Oakley frames are engineered to maintain a comfortable, secure fit. The company's patented Three-Point Fit ensures that each frame makes contact only at the bridge of the nose and behind the temples. This retains optics in perfect alignment and eliminates the discomfort of ordinary frames that hook the ears and mount with unbalanced pressure points. Some earstems are sheathed in Unobtainium®, an Oakley innovation that actually increases grip with perspiration.

X METAL®

Oakley X Metal® is the only 3-D sculpted, hypoallergenic, all-metal frame on earth. Its phenomenal strength-to-weight ratio maximizes comfort and durability. Changeable nosebombs, flex couplers and temple shocks create a fully adaptable architecture that allows the wearer to tailor the frame for a perfect fit. To maintain precise optical geometries in a customizable frame, production pieces are analyzed under real-time X-ray scanning and undergo five-axis machining in computerized systems that maintain 0.0005" tolerance.

SWITCHLOCK™ TECHNOLOGY

Oakley's new Switchlock™ Technology allows easy access for quick lens changing and lets you optimize performance in any light condition. The revolutionary design holds the lenses with a suspension system so that stresses on the frame do not affect the optics. With ordinary sunglasses, flexing of the frame can change the surface contours of the lenses, causing optical distortion. This new architecture ensures there is nothing to diminish the unbeatable clarity of High Definition Optics®, and you still get the optimized comfort and fit of a flexible frame design. Simply pivot the switch to unlock the frame and open it for easy lens changing. The quick-release system closes with a cam that locks each lens securely in place.

OAKLEY MONO SHOCK™ / TWIN SHOCK™ HINGES

The latest Oakley breakthrough is a hinge mechanism that comes in two forms: Mono Shock and Twin Shock, developed for Rx eyewear and sunglasses. Inspired by pro racing, the structures are similar to leaf springs used for shock absorption. The Mono Shock hinge has a single "tine" (a slender projecting part, like the tines of a fork) that bridges the frame and the earstem. The peerless architecture of these hinges are more durable and flexible than conventional hinges and offer greater comfort and fit with a unique look.

ASIAN FIT

Getting the right fit is essential for comfort, protection and optical performance. Oakley has engineered a collection of eyewear to complement Asian facial anatomy in both fit and comfort. The nosebridge is narrowed and deepened, and longer pad mounts are used on certain frames to allow more room for adjustment. The earstems are more rounded to better match the shape of the head and ensure a comfortably secure fit, and the curvature across the front is reduced to prevent the frame from touching at the cheeks and temples.

DESIGN FOR A PURPOSE

MEN'S SUN - SPORT

Athletes who exceed the limits of possibility know that Oakley earned its reputation by doing the same. Three decades of innovation have gained us the respect of world-class sport professionals that depend on our products in competition. The heritage continues with new milestones in technology — innovations that allow athletes to perfect their performance by allowing us to perfect their vision.

DESIGN FOR A PURPOSE

MEN'S SUN - ACTIVE

You don't have to be a professional athlete to be inspired by sports. Those who lead active lives know our icon represents the very best in performance and style. The sport culture of the brand echoes their own lifestyle as they aspire to live life to the fullest. They trust the Oakley brand to fuel their inspiration with innovation that speaks to their love of sports and appreciation of style.

Transitions[®]
SOLFX™

Oakley's High Definition Optics® (HDO®) offers the ultimate in performance. Now get the ultimate in automatic protection, comfort and convenience: lenses that darken and lighten automatically to help you keep up with Mother Nature. They're called Oakley Transitions® SOLFX™ and they combine Transitions SOLFX Photochromic technology with Oakley HDO® to give you the best clarity available, plus the unrivaled impact protection and 100% UV filtering of one of the purest lens materials on earth.

They feature base colors that precisely balance light and boost contrast to improve your depth perception. When sunlight is minimal, the color diminishes but never goes away, so you can maintain peak performance in the flatlight of overcast skies. As sunlight increases, the sunglass lens color darkens to keep up.

Add it all up and it's proof that there's only one thing better than sunglass lenses that change color: sunglass lenses that change color and give you the best visual quality, clarity and performance.
