Oakley targeting systems are designed for maximum vision and comfort under all battle conditions.

They come in three frame configurations: the O-Frame for most Factory Pilots. The L-Frame, to fit over glasses. And, our most sophisticated system, the Pro Frame.

The curve of every Oakley frame holds the lens in a perfect arc for minimum distortion at any angle of vision. While the extra-wide frame design, both side-to-side and top-to-bottom, provides maximum peripheral and up-down vision.

All Oakley MX targeting systems come equipped with the highest optical-quality, scratch-resistant Lexan lenses, formed into a perfect arc. Replacement lenses are easily interchangeable and available in a variety of tints. Our exclusive Iridium-coated lens comes as standard armament only on the Oakley Pro Frame.

When you're anticipating heavy flak, equip yourself with the Advanced Tactical Fighter Mask (known as ATFM's to the pilots who fly with them).

Made from virtually unbreakable ure-thane, Oakley ATFM's are designed to provide protection from the most hazardous MX flak you'll encounter.

Choose from the following replacement lenses: Lexan, in Iridium, rust, clear, grey or orange tints. Standard, in clear and grey. No-Fog in clear, grey and rust. And Polarized in grey only.

ATFM's are engineered with generous ventilation ports, filtered with #80 urethane foam. And, for Factory Pilots who prefer maximum intake vents, there are ATFM Half-Masks.

Full and Half ATFM's can be attached to Oakley Pro and O-Frames in a matter of seconds, without special equipment. (Not available for L-Frames.)

You can also arm your MX Targeting System with Oakley Tearoffs. Stack up to 10 optical-quality clear mylar tearoffs on any Oakley frame. Then, even in the middle of a really vicious dogfight, you can instantly clear your vision with a quick pull of the big, easy-to-grab tearoff tab. The next tab will pop up with machine gun precision, ready for action.

Tearoff tabs can be positioned on either starboard or port sides.

So, the choice is yours.
You can custom build an MX Targeting System by Oakley. Or you can wear a pair of goggles by someone else.

Tearoffs come in packs of 10, 25 and 50. O Frame and L Frame Tearoff Clips come in packs of 25. Also available: the O Frame Mud Pack, 10 Mud Pack Tearoffs and 25 Mud Pack Tearoffs.
