

The Oakley Ski Goggle System.
Designed with one thing in mind.

Everything.

The Pro Frame, with Black Iridium-over-Persimmon dual vented lens.

The O Frame with Persimmon dual vented lens.

Blizzards. Sub-zero temperatures. Intense sun. Fog. Flat light. Roasted powder. Even thermonuclear radiation.

The Oakley Ski Goggle System is ready for anything Mother Nature, or your fellow skiers, can throw at you.

Every kind of weather.

Between your eyes and the elements is our innovative dual lens system that is not only anti-fog, but anti-freeze.

The outer lens is a tough, impact-resistant arc of optically superior Lexan®. Behind it is our exclusive F-2 Series anti-fog, anti-freeze lens, impregnated with Nofogium III, the most amazing advance in no-fog technology since the amazing Nofogium II.

Of course, we didn't stop there. To make our dual lens system work even better, we drilled holes in it. Our ingenious vented lens design keeps moist air from becoming trapped and fogging. No matter how hard you ski. No matter what kind of weather. No kidding.

Every kind of light.

Thanks to four easily interchangeable replacement lenses, you can keep skiing in any kind of lighting Mother Nature provides.

There's our Violet Iridium lens for normal to bright days. Clear for

The L Frame, for use over eye glasses, with Persimmon dual vented lens.

The E Frame with Persimmon single vented lens.

Black Iridium-over-Persimmon for the best all-around lens you can take skiing. Oakley's exclusive Black Iridium reduces glare in bright sunlight while the Persimmon base actually increases contrast and enhances color in flat, overcast light.

Of course, being up in the mountains puts you several thousand feet closer to a humongous thermonuclear blast known as the sun.

So all Oakley lenses protect you against 100% of the sun's harmful ultra-violet and blue light.

Every kind of face.

When we say the Oakley Ski Goggle System is ready for everything, we mean everything. Including you.

There are four different frames, each incorporating Oakley's wrap-around design that's made to fit any face, plus an extra-wide nosebridge for extra-wide (or any size) noses.

The dramatic vertical drop of each frame provides maximum straight-down vision. While the virtually unbreakable urethane frame material holds the lens rigidly, in a perfect arc for minimum distortion at any angle of vision.

And every frame (except the E Frame) is equipped with Oakley's exclusive dual-compression face foam. So it fits comfortably, but securely, to any and every face.

Of course, that's not everything.

Carbon Fiber: Pro Frame/O Frame/L Frame

Venom: Pro Frame/O Frame

Fingerprint: Pro Frame/O Frame

Purple Haze: Pro Frame/O Frame

Grey Haze: Pro Frame/O Frame

Blue Haze: Pro Frame/O Frame/L Frame

Berry Haze: Pro Frame/O Frame

Black: E Frame

Blue: E Frame

Red: E Frame

White: E Frame

Berry: E Frame

Purple: E Frame

You can't just pick the most versatile ski goggle on earth. You have to pick a color, too. And we've got 13 of the wildest colors you never dreamed of, all with coordinated straps. So the Oakley Ski Goggle System is not

only ready for anything you might run into on the slopes. It's also ready for anything in your closet, whether you like to ski in basic black or heliotrope.

Like we said, everything.
